We’re in Randa!

Submitted by Granjow on Sun, 06/05/2011 - 15:53

At the moment nearly the whole Kdenlive team is hacking in Randa, Switzerland, at the KDE Sprint 2011. Don’t believe it? Here is the proof:

(From left to right, ttill, xzhayon, j-b-m, Granjow.) So, as you can see, we are totally busy coding and writing the manual. The main activities are:

- **Big refactoring** which will improve our code base in terms of maintainability and (for new coders) readability. We created a new branch [1] for the refactoring. When refactoring is complete, we should also be able to write some automated tests.
- **User manual**; we are now definitely moving to KDE Userbase which is based on MediaWiki (you all know this from Wikipedia). It will also simplify translation. The first version of the Quickstart tutorial [2] is already online.
- **GIT** will be our new version control system at KDE multimedia.

That’s it so far! We’ll go back coding now.
