Timeline Markers

Is it possible to like make markers while the song is playing? I want to basically be able to mark to a specific beat and so far it seems impossible to do because you can't make any type of edits while the song is playing. (I think it's called Timeline Markers) I know it's possible in Adobe Premiere but I really don't want to have to spend money when I have this nice free video editing tool to use.

Does that make sense? I hope so, lemme know. Thanks.
