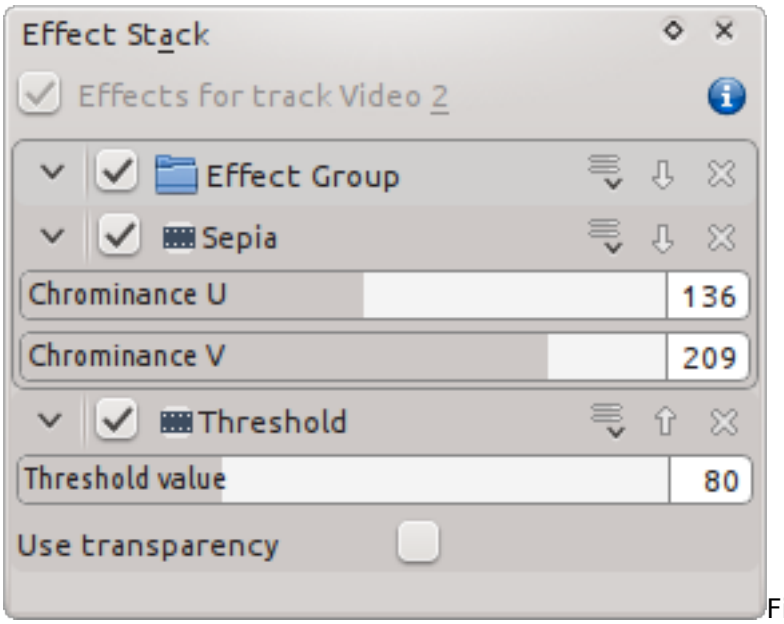
Improving effects workflow in Kdenlive

Submitted by j-b-m on Sun, 04/01/2012 - 14:55



First, I should say a big thank you to all the people that helped make our Fundraising campaign [1] so successful, but more infos about that will come in the next days. It is anyways really motivating to see that you are supporting us!

On my side, I have been working on a rewrite of the Kdenlive's effect stack. This work has just been merged into master git, so users of sunab's experimental PPA will get it in the next update, probably in 1-2 days.

The highlights are:

- Adjust parameters for several effects without switching between effects
- Drag & drop effects from the effect stack to another clip or track
- Create effect groups that can be saved or dropped to easily pass effects to another clip or track

I tested the new features for some time now, there are probably a few bugs, but it is really worth it in my opinion, So I am waiting for your feedback & bug reports. And here is a small video demonstrating the new effect stack (video link [2]):
