- Installation from binary packages [1]

Greetings!

I was excited about the newest version release, but I can't make it work! I have the following configuration:

· Ubuntu 12.04
· Kdenlive 0.9.2-0ubuntu0~sunab~precise2
· MLT version 0.8.0

Config Wizard says that it's all well!

When I add a .mp3 clip I get this error:
[mp3 @ 0xb5810220] max_analyze_duration reached
[mp3 @ 0xb5810220] Estimating duration from bitrate, this may be inaccurate
[mp3 @ 0xb5815120] max_analyze_duration reached
[mp3 @ 0xb5815120] Estimating duration from bitrate, this may be inaccurate
[mp3 @ 0xb583b660] max_analyze_duration reached
[mp3 @ 0xb583b660] Estimating duration from bitrate, this may be inaccurate
[mp3 @ 0xb583bc20] max_analyze_duration reached
[mp3 @ 0xb583bc20] Estimating duration from bitrate, this may be inaccurate
[mp3 @ 0xa366360] max_analyze_duration reached
[mp3 @ 0xa366360] Estimating duration from bitrate, this may be inaccurate
[mp3 @ 0xa5d4e00] max_analyze_duration reached
[mp3 @ 0xa5d4e00] Estimating duration from bitrate, this may be inaccurate
[mp3 @ 0xa5cea80] max_analyze_duration reached
[mp3 @ 0xa5cea80] Estimating duration from bitrate, this may be inaccurate
[mp3 @ 0xa5d38c0] max_analyze_duration reached

[mp3 @ 0xb5890660] Estimating duration from bitrate, this may be inaccurate
kdenlive: symbol lookup error: kdenlive: undefined symbol: _ZN3Mlt5Frame12get_positionEv

When I add a .mp4 clip I get this error:
kdenlive: symbol lookup error: kdenlive: undefined symbol: _ZN3Mlt5Frame12get_positionEv

When I add an image file it works well!

From http://www.kdenlive.org/user-manual/downloading-and-installing-kdenlive/... [2] it says that:
>> The recommended version of Kdenlive is 0.9 and MLT 0.7.8 <<
I tried, but can't downgrade MLT from 0.8.0 to 0.7.8 - should I?

Any advice on how to proceed?

Thank you!
VasilK
