# Kdenlive 0.9 information page

Kdenlive version 0.9 was released on the 15th of may 2012.
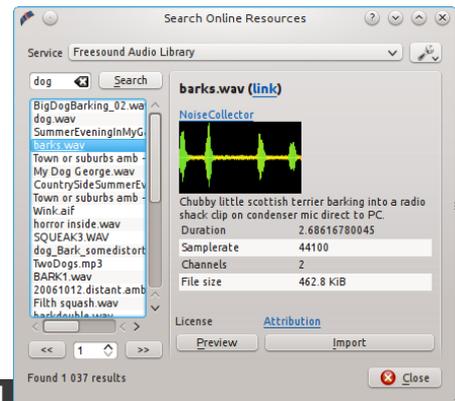

Illustrated new features

Improved effect stack
Effects can now manipulated in a more intuitive way.
You can group them, drag and drop and

adjust several effects in the same widget

[1] Browsing of online resources

You can now easily browse and import graphics,
audio and videos from online resources.

Currently, archive.org, freesound and open clip art are supported.

[2]

Changelog

Features and tweaks

- Improve detection of locale issues (default to POSIX when there is a locale conflict on the system)
- Improve timeline operation for small clips (disable resizing, only allow move)
- Add background color parameter to "Rotate" and "Pan and Zoom" effects
- Allow to scroll using the mouse wheel in monitor editing scene
- Zoom to mouse when using CTRL + mouse wheel in monitor editing scene
- Add support for new slope mode in "Color Selection" effect to allow smooth alpha transition
- Introduce grouping of effects; groups can also be saved
- Allow dragging an effect to another clip/track
- Allow record monitor to go fullscreen
- Image sequences can now start at an arbitrary frame (http://kdenlive.org/mantis/view.php?id=2508)

Kdenlive is a free and open source video editor published under the GNU Public Licence.

Page 1 of 4

- Add automatic clip alignment based on audio (experimental, has to be manually enabled)s
- Allow archiving for offline use (only archive proxies)
- Offline editing: Allow working on project with only proxies available (http://kdenlive.org/mantis/view.php?id=2509)
- Allow rendering to another framerate
- Check for missing locale and ask to install instead of opening corrupted project
- Allow to open project files manually extracted from archived project
- Support dropping a folder in the project tree (http://kdenlive.org/mantis/view.php?id=1288)
- Add "select all clips in track" and "select all clips in timeline" features (http://kdenlive.org/mantis/view.php?id=1950)
- Put audio effects in subcategories to avoid uberlong menus (http://kdenlive.org/mantis/view.php?id=2436)
- Support for project metadata (can be embedded in rendered file)
- Add Online Resource Widget allowing easy search and download of online services (freesound, openclipart, archive.org)
- Introduce MLT clip analysis to get auto normalize data in sox gain effect
- Connect recording to audio scopes
- Add audio only recording (works while playing)
- Add extract zone function: part of clip is copied to new file without re-encoding
- Introduce generic job framework to process clips
- Improve the Choose color widget: Use less space and make it easier to pick the average color value from an area
- Add GUI for effect Dynamic Text: Allows to display timecode/framecount and other data
- Rework effect stack: All effects are shown at once and are collapsible
- Add two different video stabilizers
- Add IIR Blur GUI
- Add date column to project tree

Bugfixes

- Fix monitor effect scene sometimes forcing monitor minimum size
- Fix clip move sometimes giving error when it should work
- Fix custom effects not considering capital letters in name (http://kdenlive.org/mantis/view.php?id=2580)
- Fix script rendering when script name contains whitespace
- Ensure clip in project tree is visible after rename (scroll if necessary) (http://kdenlive.org/mantis/view.php?id=2563)
- Fix monitor scene never resetting scrollbars
- Fix issues with transitions when inserting track (http://kdenlive.org/mantis/view.php?id=2477)
- Fix some GUI elements not responding to color theme change
- Do not hide render profile list when there is only one item to avoid confusion (http://kdenlive.org/mantis/view.php?id=2543)
- Fix consecutive error messages overwriting each other (http://www.kdenlive.org/mantis/view.php?id=2519)
- Fix crash when editing properties of several missing clips
- Fix vectorscope for 24b RGB images (http://kdenlive.org/mantis/view.php?id=2478)
- Fix archiving sometimes not saving playlist clips and subclips (http://kdenlive.org/mantis/view.php?id=2475)
- Fix archiving feature not saving playlist clips and slowmotion clips inside them (http://kdenlive.org/mantis/view.php?id=2475)
- Fix crash recovery feature issues with long or non UTF-8 filenames (http://kdenlive.org/mantis/view.php?id=2441, http://kdenlive.org/mantis/view.php?id=2450)
- Fix rendering jobs sometimes not starting
- Fix crash on proxy creation (concurrency issue) (http://kdenlive.org/mantis/view.php?id=2471)

Page 2 of 4

- ○ Fix zone playing (http://kdenlive.org/mantis/view.php?id=2468)
- ○ Fix click on monitor sometimes not triggering play
- ○ Fix crash when moving a folder and a clip in project tree (http://kdenlive.org/mantis/view.php?id=2458)
- ○ Fix color change not working in title widget (http://kdenlive.org/mantis/view.php?id=2459)
- ○ Fix slideshow clips created with invalid frame duration
- ○ Fix profile warning with clips that have 1088 pixels height
- ○ Fix unnecessary proxy reload on document load
- ○ Fix detection of broken render scripts

Bugs and features in the bug tracker

1 features introduced in Kdenlive 0.9

- issue #2329 **[3] Sort clips by timestamp.**

49 bugs fixed in Kdenlive 0.9

- issue #2581 **[4] Dragging an effect group on an effect duplicates the group's content**
- issue #2551 **[5] Improve the french language**
- issue #264 **[6] timeline numbers overlap and are chopped off at the top**
- issue #1950 **[7] Select all clips of all tracks**
- issue #1949 **[8] Select all clips of a track**
- issue #1065 **[9] Cannot move clip anymore until restart**
- issue #2499 **[10] Loading recent projects freezes interface following recent MLT fix for render failure**
- issue #2516 **[11] Crash on startup**
- issue #2515 **[12] Slideshow clip "frame duration" blank**
- issue #2503 **[13] *** buffer overflow detected ****
- issue #2468 **[14] Zone behaviour not right**
- issue #2502 **[15] Crash upon start - openSUSE 12.1-64bit**
- issue #2271 **[16] Preview monitor stops display the image**
- issue #2521 **[17] Earlier crash event, details forgotten**
- issue #2519 **[18] Messages in the status bar are not shown at all when a new message immediately follows**
- issue #2522 **[19] Crash while playing**
- issue #2523 **[20] new MLT 0.7.8 crash segfault at end of every rendering job**
- issue #2526 **[21] pcm_s16le codec not found by kde/MLT with recent versions of FFmpeg**
- issue #2535 **[22] kdenlive blocks on opening**
- issue #2543 **[23] Usability: Render profile selector**

confusing when only one profile exists under category.

- [issue #2544](#) **[24] Crash on startup**
- [issue #2573](#) **[25] "With track" of composite transition jumps back to auto as soon as parameters are changed**
- [issue #2588](#) **[26] Right Hand Mouse Click On Audio Track 2 Box -> CRASH**
- [issue #2576](#) **[27] Saved effect group preset are added to a clips existing effect group of the same name**
- [issue #2587](#) **[28] Kdenlive git fails to build with Qt**
- [issue #2578](#) **[29] adding a saved effects group preset by right clicking on the strip does not work**
- [issue #2580](#) **[30] Capitalization of effect and effect group presets' names is not recognized properly**
- [issue #2597](#) **[31] Crash**
- [issue #2596](#) **[32] Build Kdenlive for Ubuntu 12.04**
- [issue #1322](#) **[33] Rendering Option "Selected Zone" renders only the first frame of selected zone**
- [issue #2603](#) **[34] Kdenlive fails to build with KDE**
