- Video Effects and Transitions [1]

Sorry for my newbieness here people, but for my local town band, they want me to setup a video for a 1080p screen, tilted 90 degrees, and showing posters and video recordings with effects..

now all in all I'm new at the whole idea, my boss has thrown me in the deep end of this, so I need help!

1st off, how do I set a video from 640x360 to fit in 1080x1440, or 2 of them at once even..

2nd, how and what is available to flip/rotate and zoom into a clip (I have JPG pictures saved as 30 second AVIs)

And 3rd, I can overlay a JPG over a video, to fill in blank gaps? (so a 360px video that sitting in 1440px screen, so there is 540px gaps above and below the video that needs filling)

I am frantically searching over google, the manuals and this forum for any hits or tips for this, but nothing that really covers it..

and please none of this "oh just click this. Easy!" treat me like a 5 year old and tell me where this "this" is in the vast menus..

Thanks everyone
