Sorry for interrupting you.

I am using Ubuntu 12.04.1 LTS.

Previously, since there was problem while rendering, I installed the newest versions of Kdenlive, MLT and FFmpeg.
I downloaded them from their official websites.

Then, I opened Kdenlive 0.9.4 and imported a clip, it crashed. The problem still existed if importing audio.

Actually I cannot think of other information that you may want. Ask me if you want. Thank you.

Here is the bug report:
