Kdenlive Crashes when the "Render" button is clicked

- Rendering [1]

I am running Kdenlive 0.9.2 on Ubuntu 12.10

I have had Kdenlive install for a few months and it has worked beautifully until today. After adding some final touches to a project, I went to render and when I clicked the "Render" button, Kdenlive just closes. I relaunched the program and clicked "Render" and the same thing happened. I restarted my laptop and that didn't help. I made sure is something in the project by just opening Kdenlive and trying to render a blank project. I uninstalled and reinstalled Kdenlive and that didn't help either. I have been able to render in the past but now...nothing.

Here is the output from the terminal as the program is lauched to when the Render button is clicked...

```
$ kdenlive
Got bus address: "unix:abstract=/tmp/dbus-bjkCeNfMKk,guid=8d7ff1b582fb4ebbb1763c30510ac3df"
Connected to accessibility bus at: "unix:abstract=/tmp/dbus-
bjkCeNfMKk,guid=8d7ff1b582fb4ebbb1763c30510ac3df"
Registered DEC: true
QWidget::insertAction: Attempt to insert null action
QWidget::insertAction: Attempt to insert null action
Registered event listener change listener: true
QSpiAccessible::accessibleEvent not handled: "8008" obj: QObject(0x0) " invalid interface!"
Segmentation fault (core dumped)
```

Any help will be greatly appreciated!
