Urgent: Mono to stereo effect not working - Dan Dennedy

Hello all,

Greetings from West-Africa.

I love working with KDenlive on my Ubuntu 12.04 LTS, the program has gotten so much better / advanced in the last years.

Right now, I am doing the fine tuning of a music project and wanted to use the "mono to stereo" effect from Dan Dennedy I used before to 'turn' my mono audio into stereo. I am currently using KDenlive 0.8.2.1 btw.

When trying to manipulate the default setting to the right ones for my project it every time jumps back to the default numbers below: ?!
To: 1
To: 1
From: 0
Swap: 0

Can some body who is using this effect explain me how to exactly manipulate it (and save it)? What does the swap option mean for example? Or is there a good website where I can go to for extra info?

It seemed to have well worked in the past, but not anymore for some reason.

Thanks for any input on this, appreciated!
