Model Name: MacBook Pro
Model Identifier: MacBookPro5,3
Processor Name: Intel Core 2 Duo
Processor Speed: 2.66 GHz
Snow Leopard 10.6.8

I'm new to all of this and can't figure out where to go from here.
I think I followed all the download instructions as directed.

However: sudo chown -R $USER ~/Library/Preferences/KDE
chown: /var/root/Library/Preferences/KDE: No such file or directory

Here is my console information:
