- General questions and announcements [1]

Dear Friends,

We would like to learn more about you and encourage users to register on our Google map [2].

Also, we are working hard to verify compliance of Kdenlive with most camcorders on the market. So we would greatly appreciate that you look at our camcorder database [3]. If you camcorder is not in the database, install Kdenlive 0.7+ and add your camcorder [4] in the list.

For any Mpeg2/Mpeg4 and H264 this is important that you upload RAW footage (coming directly from camcorder) somewhere on Internet. This will allow users to benchmark their computer using this file and also help us understand some bugs. A 5 seconds footage is enough. Do not upload large files of more than 20 Mb.

We will not answer support request unless your camcorder is in the list and that minimum footage is available somewhere to reproduce bugs.

Kind regards,
Jean-Michel
