

Titler doesn't seem to work with 'typewriter' and 'blur' effects

Hi,

I wanted to check this issue on the forum before I reported it as a bug. I'm using various GIT builds of Kdenlive 0.9.3 and I can't seem to get the titling effects to work as I would expect. If I just do static titles then everything works as expected, if I try the 'typewriter' effect then when I import the created title on to the timeline it will only type the first letter, if I go back and open the title dialog again and simply highlight my title and click 'OK' then the typewriter effect displays on the timeline when previewing but then the letters are typed sporadically and often the words are not completely typed in the Rendered project even when the title is plenty long to accomodate the number of letters.

Usng the 'blur' effect shows the blurring in the title preview window but then nothing at all displays when previewing the timeline in the project monitor. I'm slowly warming up to Kdenlive and using it alongside my beloved Cinelerra but these titling issues are killin'my buzz...

Does anyone else see this? For the record I'm using MLT from GIT and the title module in MLT builds fine with no complaints.

Any advice appreciated, if this is a bug I'd like to get it reported ASAP.
